Totally 60 MCQs and we weren't able to view our marks. It had questions based on Pointers, Structures and Union, Linked List, Logical and

Reasoning, Network, OS and Hardwares. **Second Round:**

There were three questions in the second round.

All of them(Easy, Medium and Hard) were based on the Graphs and its algorithms.

They were quiet easy to solve.

Result:

They gave the result after a day. I got selected for the further rounds of Juspay in Bengaluru at the very next day of the

result.

Hackathon:

Juspay arranged the food and accommodation for us.

The Hackathon's duration is 2 days. **Final Result:**

Unfortunately, i didn't get offered by Juspay. But, Fortunately my friend **Venkatesh** got offered by Juspay.

Note: One thing i learned from their interview process is that, "For Juspay, programming is just a

I am awaiting JusPay's interview date, having cleared 2 rounds. Here is how the process went: JusPay outsourced the initial rounds to a company called Guvi. In the first round, we had 10 multiple choice questions with emphasis on pointers and pointer arithmetic. With a

Originally Answered: What kinda of questions will be there in placement of JUSPAY in bhopal?

little bit of insight, this is easy to crack. And, the first round had negative marking for wrong answers. The result would be displayed on your screen immediately. The 2nd round was a coding round with 3 questions, easy, medium and hard. All 3 were based on applications of the Graph data structure and the corresponding algorithm ... (more)

I've attended First and Second rounds of JUSPAY Recruitment Process. Here, I'm going to mention about Second Round only.

Originally Answered: What kinda of questions will be there in placement of JUSPAY in bhopal?

Second Round as you know its a coding round was conducted by MYANATOMY. They've got a very nice environment for that.

90 minutes | 3 interrelated coding questions | Based on Graph | 10 Test cases per question.

Questions were NOT VERY difficult but the main challenge was to cover the maximum

number of test cases. In short, it checks how wide can we think to manage all possibilities in our problem statement that too in that limited time span. They really want to get the hell out of you!!

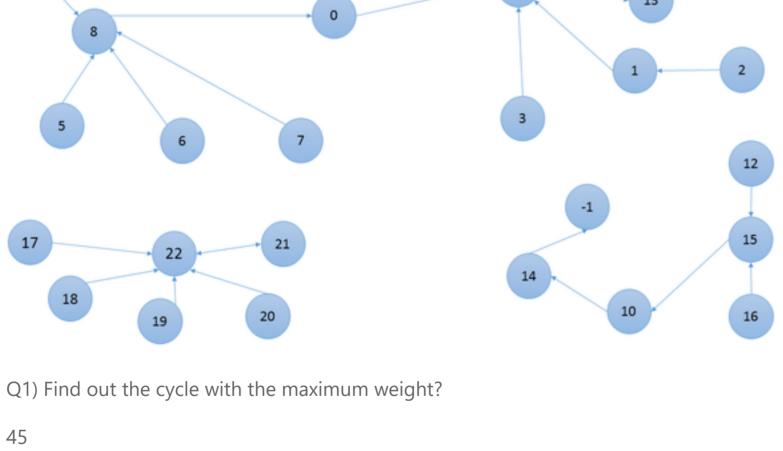

Relationship: Index of array directs to value present at that index position. Here it is... (i -> array[i])

Input: Number of nodes in the graph & an Array of nodes

-1 represents Exit gate of the graph. ie. No outgoing edge 23

4, 4, 1, 4, 13, 8, 8, 8, 0, 8, 14, 9, 15, 11, -1, 10, 15, 22, 22, 22, 22, 22, 21

Relation as $i = 0 \rightarrow array[i] = 4$

Q2) Find out the Node with the maximum weight of adjacent nodes?

22

Q3) Find out the Nearest Meeting Node for given two nodes? 9 & 2 = 4
